

The documents describe a feature that will allow users to execute an analysis on a selected assets (or a set of selected assets) on the canvas.

The user will right-click on the asset (or these assets) and the contextual menu will display a list of templates organized per categories.

After selecting a template, the application will launch a pipeline that will execute and analysis of the selected asset(s) and produce a result (textual report, diagram, table, etc.)

Here is the description of the specification documents:

- “User_Manual-Smart_Analysis_Workbench.pdf “: This document is a general description of the feature
- “Using_A_Template.pdf” : this document is a mockup of how the user executes an analysis on an asset (or a selection of assets)
- “Functional_Specifications_Smart_Document_Analysis_Framework.pdf”: this document are the functional specifications of the feature
- Technical_Specifications-Smart_Analysis_Framework.pdf: this document are the technical specifications of the feature
- “Smart_Document_Analysis_Workbench.pdf”: this document is a mockup of how a “power-user” will specify the templates to be used on the canvas
- “Intelligent_Document_Analysis_Framework-Admin_Panel.pdf”: this document describes the Admin Panel that allows an “admin” to define the content of lists (categories) that can be used in the Workbench.
- “Master_Reference-Intelligent_Document_Analysis_Framework.pdf”: This document describes the exhaustive content of lists and master data proposed by the workbench
